

IRIS HSIEH

MOBILITY, SAAS & AI-NATIVE PRODUCT DESIGNER

Relocation-ready to Japan · open to visa sponsorship · ralinzain@gmail.com · linkedin.com/in/ming-hsi-h-b59182158

SUMMARY

Senior Product Designer with 5+ years of experience across **Native Mobile (iOS/Android)**, **device-level system UX**, and **AI-native SaaS**. Experienced in designing for **location-based and in-destination** experiences, and in translating **AI reasoning and connected-device signals** into trustworthy, one-tap interactions, directly relevant to mobility, in-vehicle, and smart-city product surfaces.

EXPERIENCE

Senior Product Designer

09/2025 – Current

Wren AI – Text-to-SQL AI SaaS · sole designer, user researcher, and PM for the Agent-era redesign

- **Research:** Analyzed ~12,000 traces and interviewed 89 users; surfaced the **Expert Paradox** and found 62.5% of mode-switches were for debug, not analysis.
- **Multi-Agent UX:** Redesigned the linear pipeline into a **skill-based Agent Mode** with Checkpoints, a confirmation-before-action pattern transferable to safety-critical in-vehicle AI.
- **Audit-Grade Transparency:** Built a streaming thinking-trail and collapsible Receipt UI exposing every reasoning step, giving users control sovereignty over AI decisions.

Contract Interaction Designer

03/2025 – 08/2025

Google Pixel – Collaborated with the Android System Design team on native OS and device-level experiences

- Designed **device-level AI surfaces** for the Android/Pixel system, directly analogous to in-vehicle and smart-device OS surfaces.
- Explored **AI-generated summary UX** for system-level surfaces, improving at-a-glance comprehension on constrained screens (lock screen, always-on, status surfaces).
- Built an internal **Gemini-powered assistant** for designers and PMs to plan notification conventions, and contributed to AI notification logic standards to mitigate alert fatigue, a governance pattern applicable to multi-modal mobility UIs.

Product Designer

04/2024 – 03/2025

KKday – Leading E-commerce travel platform in Asia, serving millions of in-destination travelers with location-based services

- Designed **location-based, in-destination** mobile flows, directly relevant to connected-vehicle, navigation, and mobility-as-a-service contexts.
- Optimized core mobile configuration flows, reducing task completion time from **45 to 28 minutes** (38% efficiency gain).
- Established a **Figma component library** for travel products and defined **UX guidelines** unifying interaction quality across iOS and Android.

Interaction Designer

09/2023 – 12/2023

DPS, UnternehmerTUM – Digital Product School, TUM's applied innovation program

- Designed an **AI-based civic-infrastructure solution** for the City of Hamburg to detect and report bike-lane damage, a smart-city use case directly aligned with the Woven City vision.
- Collaborated with cross-functional teams across four countries to deliver public-sector impact.

Product Designer

12/2021 – 03/2023

None Land – Web3 venture studio focusing on DeFi and Game-Fi user experiences

- Designed end-to-end native experiences for NFT and Game-Fi systems, with emphasis on **motion, haptics, and feedback** for high-engagement interactions.

UI/UX Designer

12/2020 – 12/2021

Fable – Digital product agency across IoT, cross-border e-commerce, and marketing automation

- Designed UX for an **IoT fragrance device** (connected hardware + mobile app), a Korea e-commerce app, and improved onboarding for an ad-automation platform.
